

MsgT

vt::messaging::DefinesSerializationMode< SelfT >

vt::messaging::NonSerializedMsg< MsgT, SelfT >

```
graph BT; A[vt::messaging::DefinesSerializationMode< SelfT >] --> B[MsgT]; A --> C[vt::messaging::NonSerializedMsg< MsgT, SelfT >];
```

The diagram illustrates the relationships between three classes. At the top, there are two boxes: 'MsgT' on the left and 'vt::messaging::DefinesSerializationMode< SelfT >' on the right. A horizontal line with upward-pointing arrows at both ends connects the bottom of these two boxes. Below this line, centered, is a third box labeled 'vt::messaging::NonSerializedMsg< MsgT, SelfT >'. A vertical line descends from the center of the horizontal line to the top of this bottom box, indicating that 'vt::messaging::NonSerializedMsg' inherits from both 'MsgT' and 'vt::messaging::DefinesSerializationMode'.
